

## Preliminary Table of Lode and Placer Deposits and Occurrences of Mongolia

By Gunchin Dejidmaa, Gombosuren Badarch, Noosoi Chimed, and  
Dangindorjiin Dorjgotov  
(Institute of Geology and Mineral Resources,  
Mongolian Academy of Sciences, Ulaanbaatar), and  
Ayurzana Gotovsuren  
(Monrud Company, Mineral Exploration and Mining Company,  
Ulaanbaatar, Mongolia)

This report is a preliminary tabular compilation of the significant metalliferous and selected non-metalliferous lode deposits and placer deposits and occurrences of the Mongolia. The mineral deposit and occurrence data are being compiled as part of a project on the *Mineral Resources, Metallogenesis, and Tectonics of Northeast Asia* (Eastern and Southern Siberia, Mongolia, Northeast China, South Korea, and Japan). For additional information on the project, please refer to the companion project summary by Nokleberg (this volume). In future publications for the associated project, the descriptions of the significant mineral deposits will be expanded.

The data were compiled by the following persons.

Quadrant	Compiler	Institute or Company
K 47, 48, 49	D. Dorjgotov and N. Chimed	Institute of Geology and Mineral Resources, Mongolian Academy of Sciences, Ulaanbaatar, Mongolia
L 45, 46	G. Dejidmaa	Same
L 47	G. Badarch and N. Chimed	Same
L 48, 49	Ts. Gotovsuren	Monrud Company, Mineral Exploration and Mining Company, Ulaanbaatar, Mongolia
M 45, 46, 47, 48, 49	G. Dejidmaa	Institute of Geology and Mineral Resources, Mongolian Academy of Sciences, Ulaanbaatar, Mongolia
M 50	D. Dorjgotov	

### DATA SOURCES

The mineral deposit and occurrence data were compiled from the following sources.

Guide to the geology and mineral resources of Mongolia, 1996, D. Jargalsaihan, M. Kazmer, Z. Bara, and D. Sanjaadorj, eds.: Geological Exploration Consulting Services (GCS) Co., 330 p., 2 sheets, scale 1:3, 200,00.

State Geological Fund, May 1997, Location map of base metal (Pb, Zn, Ni, Co, Al) deposits and occurrences of Mongolia, Series 4, 1 sheet, scale 1:3,200,000.

State Geological Fund, May 1997, Location map of industrial metal (Pb, Zn, Ni, Co, Al) deposits and occurrences of Mongolia, Series 3, 1 sheet, scale 1:3,200,000.

State Geological Fund, May 1997, Location map of base metal (Cu) deposits and occurrences of Mongolia, Series 2, 1 sheet, scale 1:3,200,000.

State Geological Fund, May 1997, Location map of rare metal (Sn, W, Mo, Bi, Be, Ta, Nb, Li) deposits and occurrences of Mongolia, Series 5, 1 sheet, scale 1:3,200,000.

State Geological Fund, 1995, D. Largalsayhan, ed., Gold resources map of Mongolia, Series 5, 1 sheet, scale 1:3,200,000.

### DEFINITIONS

The following key definitions are provided.

*Deposit.* A general term for any lode or placer mineral occurrence, mineral deposit, prospect, and (or) mine.

*Mine*. A site where valuable minerals have been extracted.

*Occurrence*. A site of potentially valuable minerals on which no visible exploration has occurred, or for which no grade and tonnage estimates have been made.

*Prospect*. A site of potentially valuable minerals in which excavation has occurred.

## CLASSIFICATION OF MINERAL DEPOSITS

Preliminary classifications of mineral deposit types (model) are assigned to the mineral deposit and occurrence data herein compiled. For a preliminary description of mineral deposit types (models) for Mongolia, please refer to the companion article by Dejidmaa and others (this volume). For a general discussion of the methodology of mineral deposit models, please refer to the articles by Eckstrand (1984), Cox and Singer (1986), Nokleberg and others (1987, 1993, 1994a, b, 1997).

## DESCRIPTIONS OF HEADINGS FOR TABULAR DESCRIPTIONS FOR SIGNIFICANT LODE DEPOSITS AND PLACER DISTRICTS

### Map Number, Name, Major Metals, Minor Metals

In the succeeding table, row, column (Col.), and map number refers to a specific deposit in a quadrant of latitude and longitude. Mineral deposits and occurrences are numbered separately within quadrants bounded by integer values of 4° of latitude and 6° of longitude. The quadrants are numbered from west to east in rows, and are lettered from south to north in columns. A latitude and longitude location is stated for each deposit in degrees and minutes. Names of lode deposits are derived from published sources or common usage. Major and minor metals are the known potentially valuable metals reported for each deposit, and are listed in order of decreasing abundance and (or) value, and are shown by standard chemical symbols.

### Lode Deposit Type

Type of lode deposit, or lode deposit model is an interpretation that was made by examining the summary of the deposit and then classifying the deposit using the deposit models previously described. The type is queried where insufficient description precludes precise determination. For a few deposits, either the closest two deposit models are listed.

## Abbreviations in Tables

Standard chemical symbols: for example, Au, gold;

Cu, copper; Fe, iron; U, uranium

PGE: Platinum-group elements--minerals and alloys

REE: Rare-earth elements
